ABSTRACT

A leg assembly for selective attachment to a portable support structure having a base and removable lid said leg assembly. The leg assembly includes a plurality of legs that are selectively attachable to both the base and lid. When attached, the legs extending from the base to the lid thereby supporting the lid. The legs are substantially parallel to one another. The assembly further includes at least one cross member extending between two of the legs to stabilize and prevent lateral movement of the legs. The cross member also abuttingly contacts and supports the lid so that the base and lid may function as a support structure.
